1. Freeze status

Overall decision: FROZEN_LOCAL_READY_FOR_MANUAL_PUBLICATION.

This package freezes the local publication chain. It does not assert that kurpishev.com, DOI repository, or arXiv have already published the materials.

RU: точка v8.8 фиксирует локальную публикационную готовность. Внешний URL, DOI или arXiv ID не заявляются как уже полученные.

2. Doctrine control law

C@C -> Rep(R,I,U;D) -> lambda -> CGI -> Status -> RBD

Publication status follows the same rule: without remote domain evidence and sufficient publication foundation D_pub, VERIFIED_PUBLIC is blocked.

3. Source chain local SHA audit
